

What is Cannabinol (CBN)

Its a mildly psychoactive cannabinoid found only in trace amounts in Cannabis, and is mostly found in aged ,dried Cannabis.

What does it do ?

Cannabinol, or CBN for short, can induce a light sense of euphoria, but is normally used as a tranquilliser.

(a drug used to reduce stress or tension without reducing mental clarity)

Several scientists have compared the effect, after ingesting 2,5 tot 5 mg CBN , to the effect of a pharmaceutical tranquilliser, with the physical relaxation ,comparable to a dose of 5 to 10 mg of Diazepam.

What can i use it for ?

Similair to many other active compounds in Cannabis, CBN has multiple applications.

That is, ofcourse, the power of all Cannabis based medicine.

Among its medicinal applications ,CBN has strong anti-bacterial property's.

Even the most hardiest infections, like "MRSA"

(Meticilline-resistente Staphylococcus aureus)a known scourge in hospitals,are no match for CBN.

It can be safely used for treating

Tumorous growths

Warts

Boils

Insomnia

Nausea

Inducing apetite

Epilepsy

Supporting of the healing of bones and recovery of medical surgery.

To strengthen and enhance the immune system, and as a non narcotic painkiller.

Suitable for use in many other applications
